Respiratory Therapy™

The Journal of Pulmonary Technique

BUYERS GUIDE 2018

"I am able to look forward to
another day of speech,
instead of writing without emotion;
I can swallow with confidence
instead of fear of aspirating;
and last but not least,
every night I have the privilege
to tell my husband and children
'I love you' without difficulty."

The Passy Muir® Valve, bringing the gift of speech to patients every day.

For more information on how the Passy Muir Valve restores communication, improves swallowing, may reduce aspiration, facilitates secretion management, improves olfaction, facilitates weaning, expedites decannulation, and enhances quality of life, visit www.passymuir.com

Mobile therapy that works.

Introducing the Monarch® Airway Clearance System

The Monarch® Airway Clearance System is a high frequency chest wall oscillation (HFCWO) therapeutic device with revolutionary new technology, combining mobility with targeted kinetic energy and airflow to help thin and mobilize secretions from the airways.¹ By allowing patients to move about freely during therapy, it empowers them to take control of their therapy – and lives.

- **Pulmonary Oscillating Discs (PODs)** containing magnets, generate targeted energy to the upper and lower lobes of the lungs.
- **Mobile patient-friendly design** gives patients more control of their therapy, supporting adherence.
- **VisiView® Health Portal** connectivity tracks therapy automatically.

To schedule a demonstration, call your Hill-Rom representative or 800-426-4224.

How long will the oxygen last at this flowrate?

Praxair's *Grab 'n Go® Digital* portable medical oxygen system now features an easy-to-read "time remaining" display, with audible and visual alerts. These alerts are designed to activate if the cylinder pressure drops below 300 psig. With no need to estimate oxygen supply, transports can be more efficient with reduced human error.

No guesswork. No maintenance. Everything you need is built into the new *Grab 'n Go® Digital* system and maintained by Praxair.

A *NEW* Direction for Subglottic Secretion Management

The **SIMEX** Subglottic Aspiration System, available as *cuff M* and *cuff S*, is the most advanced solution for the aspiration of subglottic secretions, and features the all new, state of the art, *automated intermittent* mode of therapy.

- Automated and fully customizable
- Significant increases in volumes of secretions collected
- Reduced need for bronchial aspiration
- Reduced risk of injury to the tracheal mucosa
- More RT control over the aspiration procedure
- Increased patient comfort/virtually silent operation
- Self-contained system prevents cross contamination

“Using syringe or other conventional suction sources for SSD proved impractical and ineffective in our institution. An 8-month trial of 10 patients using the SIMEX automated subglottic aspiration system resulted in significant increases in volumes of secretions collected, significant decreases in maceration and soiling, and there were no incidents of VAE or VAC.”

Jerry Gentile, BSRT, BSHA, MBA, EdD(c), RT, RRT
Partner, Sevara Health, LLC
Director of Respiratory Care Services
Eastchester Rehabilitation & Healthcare Center
Bronx, New York

The SIMEX *cuff M* and *cuff S* are the only suction pumps designed and indicated for intermittent aspiration of subglottic secretions.

When a patient struggles with ventilation —it's personal

Now you can improve patient comfort and outcomes with Personalized Ventilation, enabled by Getinge.

For hard-to-wean patients, Personalized Ventilation offers you a method that's proven effective by more than 200 studies. Using NAVA[®] (Neurally Adjusted Ventilatory Assist) technology, exclusive to SERVO ventilators, it monitors diaphragm activity so you can

improve synchrony¹. This can lead to reduced need for sedation^{2,3}, fewer complications⁴⁻⁷, and shorter weaning periods⁸⁻¹⁰. Which is something both you and your patients can be comfortable with.

Customized. Connected. Complete.

Siemens Healthineers critical care portfolio can transform care delivery with the right test in the right place at the right time.

You need lab-quality testing solutions in every care setting. From nimble handheld to robust central lab solutions, our portfolio enables increased efficiency and shorter time to diagnosis. Open, connected solutions let clinicians access shared data when and where it is needed, to speed up clinical decision making.

Build a blood gas testing environment enabled by our POC Ecosystem™ Solution that reduces the complexity and improves the efficiency of your operations:

- epoc® Blood Analysis System
- RAPIDPoint® 500 Blood Gas System
- RAPIDLab® 1200 Blood Gas System

Product availability may vary from country to country and is subject to varying regulatory requirements.

All powered by our open informatics solution—allowing you to easily connect more than 170 devices from more than 40 manufacturers' point of care analyzers to your hospital information system, providing a flexible, long-term solution.

Now you can customize, without compromise.

Can a Combivent[®] Respimat[®] inhaler be used inline?

...Yes!

RTC 26-C
Inline Aerosol Adapter

With the **RTC 26-C Inline Aerosol Adapter** you can now use a Combivent[®] Respimat[®] inhaler inline!

...another treatment option for ventilator patients!
